

Arrest P

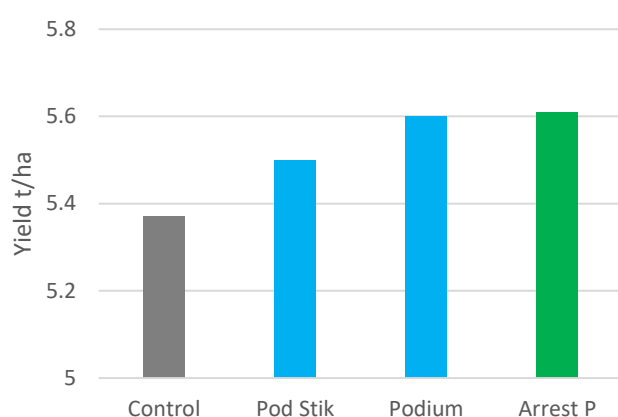

Pack Size	5L
Application Rate	1L/ha
Ideal Timing	Pods Green & Bendy
Crops	Oilseed Rape, Peas, Beans, Soya

Arrest P is a polymer and surfactant blend designed to reduce pod shatter in oilseed rape, pulses, and soya crops. Applied at the pods green and bendy stage it will guard against shatter, protecting yield and reducing volunteers in the next crop.

Arrest P covers the pod to increase its physical strength, without impairing the natural drying process or affecting seed maturity or quality.

Arrest P performance in Beans

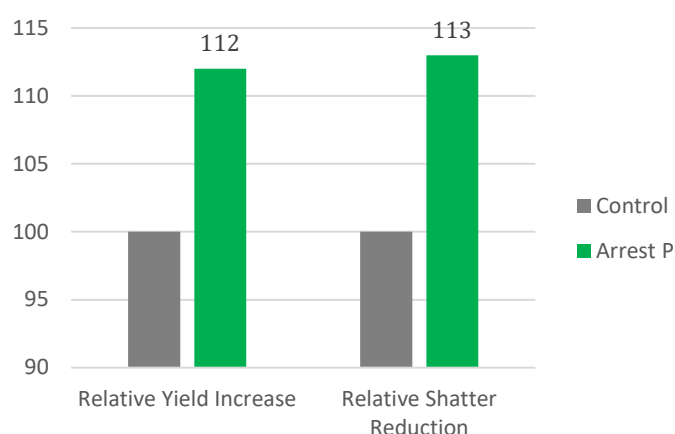

Trial undertaken by Eurofins in the UK.

Usage Guidelines

- Use Arrest P at 1.0 l/ha in 150-300 liters spray water.
- Best application at GS80 (green and bendy), or until GS89 (fully ripe – nearly all pods ripe, seeds black and hard) in conjunction with desiccants.
- Efficacy is better when applied prior to desiccation timing, however for convenience Arrest P can be co-applied with the desiccant.
- Clean tank, pump, spray lines with non-ionic wetter immediately after application.
- Do not leave the sprayer without washing out.

Relative performance (%) of Arrest P over untreated in oilseed rape

Sum of three independent trials in the UK 2016,17 &18
